Protection for Public Transportation Workers During the COVID-19 Pandemic

Wear a Mask—Protect Yourself and Others

- For everyone’s safety, CDC recommends that everyone ages 2 and older—passengers and workers—wear a mask on public transportation and while in airports and stations.
- Wear a mask with the best fit, protection, and comfort for you.

Protection Against COVID-19 on Public Transportation and Inside Transportation Hubs

- Get vaccinated. COVID-19 vaccines are safe and available for everyone age 5 and older, regardless of your citizenship status and whether you have health insurance.
- When possible, stay at least 6 feet apart from other people who don’t live with you and who may not be vaccinated.
- Clean frequently touched surfaces often.
- Frequently wash your hands with soap and water or use a hand sanitizer with at least 60% alcohol when soap and water aren’t available.

What to Do if You’re Sick

- If you’re experiencing COVID-19 symptoms, you should get a COVID-19 test and immediately notify your employer if you test positive.
- Talk to your health care provider and follow CDC-recommended steps to self-isolate or seek care. And don’t return to work until you meet the criteria to stop isolating at home.
